VEGETABLES - FRESH MARKET

ANNUAL SUMMARY

1957

Production of the 28 principal fresh market vegetables and melons in 1957 was 5 percent less than in 1956, the Crop Reporting Board announced today. At 204.9 million hundredweight, production this year was about 2 percent above average. Several important crops were in lighter supply in 1957 than a year earlier. Reductions for beets, broccoli, brussels sprouts, cabbage, carrots, cauliflower, celery, shallots, spinach, and honey dews were substantial. Only asparagus, snap beans, cucumbers, eggplant, and escarole registered significant increases. Value of the 28 principal vegetable and melon crops totaled \$839,629,000 in 1957 which is 4 percent more than the value of these crops in 1956. This is the second highest value of record having been exceeded only in 1952.

Strawberry production established a new record high in 1957. At 563.8 million pounds, output this year was about 3 percent larger than in 1956 and 40 percent above average. Adverse weather caused a loss of considerable additional production and market conditions resulted in additional loss of fruit. Value of the 1957 crop was down to \$79,483,000, a reduction of 18 percent from 1956.

The leading fresh market vegetable States in 1957 are indicated below.

Rank	Acreage		Production		Value	
	State	Percent of total	State	Percent of total	State	Percent of total
1	California	21.2	California	31.8	California	37.6
2	Florida	15.6	Florida	13.1	Florida	16.6
3	Texas	15.4	Texas	9.4	Texas	7.1
4	Georgia	5.1	New York	6.9	Arizona	6.5
5	New York	4.4	Arizona	5.7	New York	4.6

The estimates in this publication relate primarily to fresh market production. While the estimates for many of the vegetable crops include only fresh market production, those for a few crops, such as broccoli and carrots, include substantial quantities processed. For asparagus and strawberries, which are perennial crops providing production for both fresh-market and processing outlets from the same acreage, a utilization breakdown is given in addition to total production. "Acreage for harvest" in this summary embraces total acreage available for harvest, including mature acreage abandoned or only partially harvested because of low prices or other economic factors. "Value" is for the marketing season or crop year and does not correspond to calendar year income. Group and All States averages are simple averages of annual data.

This summary, issued by the Crop Reporting Board, provides fresh market estimates of acreage, production, and value for the 28 principal vegetables and melons grown commercially in the more important producing States. These estimates provide basic statistics on 81 percent of the national output of vegetables and melons grown for fresh market sale. Fiscal limitations prevent including all vegetables in all States in this program. Estimates of mint for oil and strawberries are also in this report. These data are based upon information secured by State Agricultural Statisticians from growers, shippers, processors, public agencies, and other source.
